Professional Project Summary

The CodeHub project is the culmination of a collaborative effort by a team of four developers as part of our "Application Developer Designers" training. This project serves as a comprehensive demonstration of our training and has provided us with extensive experience in the setup, design, and development of a complete application.

CodeHub is an application designed to provide users with a platform to publish articles and engage in discussions by commenting on them. Its interactive features foster exchanges and encourage community-driven discussions, creating a valuable environment for learning and knowledge sharing.

In addition to the forum functionality, CodeHub also includes a dedicated interface for administrators. This interface offers advanced functionalities to administrators, such as user management, content moderation, and the ability to modify or delete articles and comments. This feature grants administrators greater control over the application's content, ensuring a safe and high-quality environment for all users.
